PERFORMANCE TEST**

# Semantic Compliance and Interoperability Tests

Category B

# Project details

- SemTest
- Easy Global Market; EURECOM
- Start date: 1st September 2017 for 10 months
- Semantic technology is argued to be a way to address the interoperability problem in IoT, a highly dynamic and heterogeneous environment. With a syntactical and semantical verifier designed and developed, we would like to bring the tool to F-interop framework to allow a larger number of market stakeholders to perform semantic interop tests in order to benefit from semantic technology.
- Impact 1: Increase the variety of the tests offered by F-interop platform to increase its attractiveness
- Impact 2: Provide semantic validation tool to enable market confidence building in semantic standards (oneM2M, W3C SSN, etc.)

**Thank you**
