

F-INTEROP is developing a **PLATFORM FOR ONLINE INTEROPERABILITY AND PERFORMANCE TEST**

supporting emerging technologies for the Internet of Things from research to standardization and to market launch.

F-Interop integrates and extends several European testbeds federations with a shared "Testbed as a Service"

It will provide a set of tools enabling:

- STANDARDIZATION COMMUNITIES** to save time and resources, to be more inclusive with partners who cannot afford travelling, and to accelerate standardization processes;
- SMEs AND COMPANIES** to develop standards-based interoperable products with a time-to-market cut by 6-12 months, and significantly lowered engineering/financial overhead.

F-Interop will turn FIRE+ into an accelerator for new standards and innovations.
